Laboratory Surveillance Report

Influenza (Week ending November 30, 2013)

National Influenza Update (CDC)

- Nationally, CDC reported that 10.1% of the 5,306 surveillance specimens were positive for influenza. The majority of the influenza A viruses subtyped were 2009 HINI (96%).
- Influenza B activity is sporadic (6.5%). According to CDC, regional activity was reported in 9 states primarily located in the southern half of the US.
- Antiviral surveillance data showed sporadic (2.3%) resistance to Oseltamivir amongst the 2009 HINI viruses tested.

Wisconsin Update

- Surveillance data showed an increase to 9.2% of the 477 influenza specimens tested by PCR in Wisconsin were positive.
- No influenza B activity was reported.
- The majority (89.5%) of influenza A positives subytped were influenza A (2009 HINI).

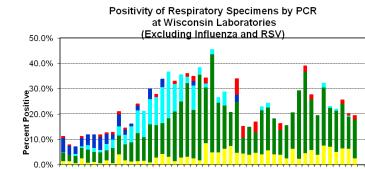

Surveillance Specimen Requests:

NEW Due to increasing activity It is no longer necessary to send influenza rapid testing positive specimens for confirmatory testing

- Please send the following specimens to WSLH:
- I. Influenza-related hospitalizations
 - 2. Specimens that fail to subtype (Ct <35) if subytping was performed (e.g. 2009 HINI & H3).

Other Surveillance Data (Wisconsin)

Rhinovirus/Enterovirus were the predominate respiratory viruses detected in Wisconsin. 50.0% 40.0%

Coronavirus

12/7/13

Week Ending November 30, 2013

| Virus | # Tested | % Positive |
|----------------------------|----------|------------|
| Rhinovirus/ enterovirus | 130 | 15.4 |
| Parainfluenza | 152 | 2.6 |
| RSV | 178 | 1.7 |
| Adenovirus | 78 | 1.3 |
| Human metapneu- movirus | 146 | 0 |
| Coronavirus | 78 | 0 |

% Positive for Influenza by PCR (Wisconsin)

Synopsis Influenza activity

Surveillance Data

- is increasing rapidly in Wisconsin.
- Influenza A (2009) HINI) was the predominate subtype detected.

 Rhinovirus/ enterovirus were the predominating non-influenza respiratory viruses reported.
